# 1. Design a form for Employee registration which includes all elements of form tags.

```
<!DOCTYPE html>
<html lang="en">
<head>
<meta charset="UTF-8">
<meta http-equiv="X-UA-Compatible" content="IE=edge">
<meta name="viewport" content="width=device-width, initial-scale=1.0">
<title>Employee Registration Form</title>
</head>
<style> body
{
    margin: 0px;
    padding: 10px;
    text-align: start;
}
input {
    margin: 10px;
}
.abhi {
    text-align: center;
}
.content
{margin-left: 33%;
}
</style>
<body>
<h1 class="abhi">Employee Registration Form</h1>
<div class="content">
<label for="name">Full Name:</label>
<input type="text">
<br>
<label for="name">Father's Name:</label>
<input type="text">
<br>
<label for="name">Mother's Name:</label>
<input type="text">
<br>
<label for="dob">DOB:</label>
<input type="date" name="dob" id="dob">
<br>
<label for="name">Email:</label>
<input type="text">
<br>
<label for="name">Contact Number:</label>
<input type="text">
<br>
<label for="name">Address:</label>
<input type="text">
<br>
<label for="gender">Gender:</label>
```

```

<input type="radio" name="gender"> Male
<input type="radio" name="gender"> Female
<input type="radio" name="gender"> Other
<br><br>
<label for="Department">Department:</label>
<select name="dep" id="dep">
<option value="accounts">Accounts</option>
<option value="admin">Administration</option>
<option value="it">IT</option>
<option value="management">Management</option>
</select>
<br><br>
<label for="image">Photo:</label>
<input type="file">
<br>
<input type="submit" value="Register">
<br><br><br><br>
</div>
</body>
</html>

```

### Output:-

**Employee Registration Form**

Full Name:   
 Father's Name:   
 Mother's Name:   
 DOB:    
 Email:   
 Contact Number:   
 Address:   
 Gender: ☐ Male ☐ Female ☐ Other  
 Department:    
 Photo:  No file chosen

2. Write a HTML code to generate a class timetable and add external CSS to customize the properties of the font, background etc. (color, bold and font size)

```
<!DOCTYPEhtml>
<html lang="en">
<head>
<meta charset="UTF-8">
<meta http-equiv="X-UA-Compatible" content="IE=edge">
<meta name="viewport" content="width=device-width,initial-scale=1.0">
<title>TimeTable</title>

## Venus

From Wikipedia, the free encyclopedia

*This article is about the planet. For the deity, see Venus (mythology). For other uses, see Venus (disambiguation). "Second planet" redirects here. For other systems of numbering planets, see Planet § History.*

**Venus** is the second planet from the Sun and is named after the Roman goddess of love and beauty. As the brightest natural object in Earth's night sky after the Moon, Venus can cast shadows and can be visible to the naked eye in broad daylight.<sup>[18][19]</sup> Venus' orbit is smaller than that of Earth, but its maximal elongation is 47°; thus, it can be seen not only near the Sun in the morning or evening, but also a couple of hours before or after sunrise or sunset, depending on the observer's latitude and on the positions of Venus and the Sun. Most of the time, it can be seen either in the morning or in the evening. At some times, it may even be seen a while in a completely dark sky. Venus orbits the Sun every 224.7 Earth days.<sup>[20]</sup> It has a synodic day length of 117 Earth days and a sidereal rotation period of 243 Earth days. Consequently, it takes longer to rotate about its axis than any other planet in the Solar System, and does so in the opposite direction to all but Uranus. This means that the Sun rises from its western horizon and sets in its east.<sup>[21]</sup> Venus does not have any moons, a distinction it shares only with Mercury among the planets in the Solar System.<sup>[22]</sup>

The third smallest planet in the Solar System, Venus is a terrestrial planet and is sometimes called Earth's "sister planet" because of their similar size, mass, proximity to the Sun, and bulk composition. It is radically different from Earth in other respects. It has the densest atmosphere of

**Venus ♀**

False colour composite of Venus in visual and ultraviolet wavelengths (from Mariner 10). The surface is completely obscured by clouds.

**Designations**

4. Write an HTML page that contains a selection box with a list of 5 countries, when the user selects a country, its capital should be printed next to the list; Add CSS to customize the properties of the font of the capital (color, bold and font size).

```
<html>
<head>
<title>capitals of countries</title>
<style>
    p { color:
red;
        font-weight: bold;
        font-size: 50;
    }
</style>
<script language="javascript">
    function capital() {
        var cunt = document.forms["frm1"].country.value; var
        capital = "Please select any country ";
        if (cunt == "india") { capital =
            "NEW DELHI";
        }
        if (cunt == "china") { capital =
            "BEIJING";
        }
        if (cunt == "pakistan") {
            capital = "ISLAMABAD";
        }
        if (cunt == "bangladesh") {
            capital = "DHAKA";
        }
        if (cunt == "japan") { capital =
            "TOKYO";
        }
        if (cunt == "select") {
            capital = "Please select any country";
        }
        document.getElementById("capt").innerHTML = capital;
    }
</script>
</head>
<body>
<form name="frm1">
<br />
<center>
    Select a Country :<select name="country"
onchange="capital()">
<option value="select">--SELECT--</option>
<option value="india">INDIA</option>
<option value="china">CHINA</option>
<option value="pakistan">PAKISTAN</option>
```

```
<option value="bangladesh">BANGLADESH</option>
<option value="japan">JAPAN</option>
</select>
<br />
<br />
<font color="green" size="6">Capital is :</font>
<p id="capt"></p>
</center>
</form>
</body>
</html>
```

**Output:-**

<p>Select a Country : <input type="text" value="JAPAN"/></p> <p>Capital is :</p> <p><b>TOKYO</b></p>	<p>Select a Country : <input type="text" value="PAKISTAN"/></p> <p>Capital is :</p> <p><b>ISLAMABAD</b></p>	<p>Select a Country : <input type="text" value="INDIA"/></p> <p>Capital is :</p> <p><b>NEW DELHI</b></p>

## 5. Develop and demonstrate the usage of inline, internal and external style sheet using CSS.

### Index.html

```
<!DOCTYPE html>
<head>
<meta name="viewport" content="width=device-width, initial-scale=1.0" />
<title>CSS internal,external and inline</title>
<link rel="stylesheet" href="style.css" />
<style>
  body {
    background-color: linen;
  }
  .first {
    background-color: blue;
    height: 100px;
    width: 100px;
  }
</style>
</head>
<body>
<div class="first">BOX</div>
<div class="second">BOX</div>
<div style="background-color: red; height: 100px; width: 100px">BOX</div>
</body>
</html>
```

### Style.css

```
.second{
  background-color: green;
  height:100px; width:100px;
}
```

### Output:-

## 6. Create a student registration system page using HTMLtags and apply box model using external CSS.

### Index.html

```
<!DOCTYPE html>
<head>
<meta name="viewport" content="width=device-width, initial-
scale=1.0">
<title>Student Registration Form</title>
<link rel="stylesheet" href="style.css">
</head>
<body>
<form class="signup-form" action="/register" method="post">
<div class="form-header">
<h1>Registration</h1>
</div>

**7 A. Write a JavaScript program to test the first character of a string is uppercase or not.**

```
function upper_case(str)
{
  regexp = /^[A-Z]/;
  if (regexp.test(str))
  {
    console.log("String's first character is uppercase");
  }
  else
  {
    console.log("String's first character is not uppercase");
  }
}
upper_case('Abcd');
upper_case('abcd');
```

**B. Write a JavaScript code to take color from user and apply that color to Div tag.**

```
<html>
<head>
<style>
  #Myelement {
    width: 500px;
    height: 100px;
  }
</style>
</head>
<body>
<div id="Myelement"
  onclick="changeColor()">
</div>
<input name="MyColorPicker"
  type="color"
  id="MyColorPicker" />
</body>
</html>
```

```
<script>
  function changeColor() {document.getElementById(
    "Myelement").style.backgroundColor =document.getElementById(
    "MyColorPicker").value;
  }
</script>
```

**Output:-**

**8. Write JavaScript to validate the following fields of the Registration page.** 1. First Name (Name should be min 4 characters and max 8 characters) 2. Password & Confirm Password (Password should not be less than 8 characters length). 3. Email id (should not contain any invalid mail) 4. Mobile Number (Phone number should be 8 digits only) 5. Last Name and Address (should not be Empty).

**Index.html**

```
<html>
<head>
<style>
.content
{
    padding: 50px;
    margin-left: 25%;
}
input
{
    padding: 10px;
}
</style>
</head>
<body>
<h1 class="abhi">Login</h1>
<div class="content">
<label for="name">Full Name:</label>
<input type="text" onblur="nameCheck()" value="" id="fname"><br>
<label for="name">Password:</label>
<input type="password" onblur="passCheck()" value=""
id="pass"><br>
<label for="name"> Confirm Password:</label>
<input type="password" onblur="conPassCheck()" value="" id="cpass"><br>
<label for="name">E-mail</label>
<input type="email" onblur="eCheck()" value="" id="mail"><br>
<label for="mob">Mobile:</label>

```

### **Output:-**

The screenshot shows a web browser window with the address bar displaying "127.0.0.1:5500". The page title is "AWS Management..." and the page content includes a "Login" section. A dark alert box is overlaid on the form, displaying the message "127.0.0.1:5500 says Please provide a valid email address" with an "OK" button. The login form contains the following fields:

- Full Name:
- Password:
- Confirm Password:
- E-mail:
- Mobile:
- Last Name:
- Address:

**9. Create a HTML form and write JavaScript to generate the invoice with one click of GENERATE INVOICE button. Take any 5 product with rate and quantity and display total for every product. Calculate Grand Total by including 18% GST.**

## 10 A .Write a JQuery code to give animation to div on click of button.

```
<!DOCTYPE html>
<html>
<head>
<script src="https://ajax.googleapis.com/ajax/libs/jquery/3.6.0/jquery.min.js"></script>
<script>
$(document).ready(function(){
  $("button").click(function(){
    $("div").animate({left:
      '250px',
      opacity: '0.5',
      height: '150px',
      width: '150px'
    });
  });
});
</script>
</head>
<body>

<button>Start Animation</button>
<div style="background:#98bf21;height:100px;width:100px;position:
absolute;"></div>

</body>
</html>
```

### **Output:-**

## B. Write a JQuery code to add dynamic element on page on click of button.

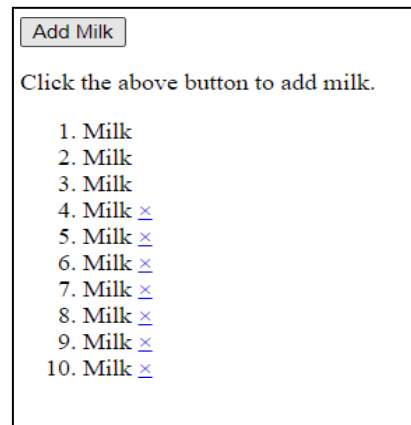

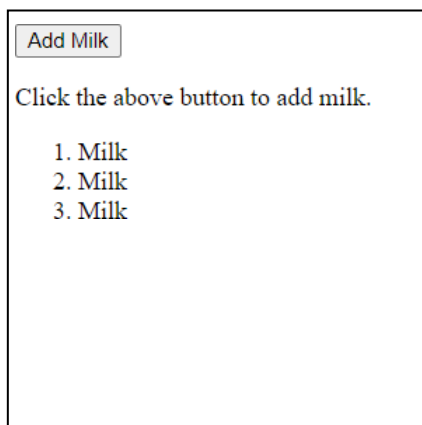

```
<!DOCTYPE html>
<html lang="en">

<head>
<meta charset="utf-8">
<title>jQuery Bind Click Event to Dynamically added
Elements</title>
<script src="https://code.jquery.com/jquery-
3.5.1.min.js"></script>
<script>
    $(document).ready(function () {
        $("button").click(function () {
            $("ol").append("<li>Milk <a href='javascript:void(0);'
class='remove'>&times;</a></li>");
        });
        $(document).on("click", "a.remove", function () {
            $(this).parent().remove();
        });
    });
</script>
</head>

<body>
<button>Add Milk</button>
<p>Click the above button to add milk. <p>
<ol>
<li>Milk</li><li>Milk</li><li>Milk</li>
</ol>
</body>

</html>
```

### Output:-

**11. Write a jQuery program to demonstrate the use of mouse event, keyboard event and form event.**

```
